ZoomClicker version 0.1

The purpose of this program is to automatically switch pages while viewing a >25 participant Zoom meeting in gallery mode. The application was inspired by participating in a Quaker Meeting for Worship, where members of the Society of Friends gather in silent worship. For most of the hour-long worship, Friends sit in silence, so Zoom does not have a speaker to focus on. This program periodically cycles through the pages at a preset rate, allowing the participant to see all other participants, even those on other pages, and freeing him/her/them to focus on spiritual aspects of the worship rather than the mechanics of their computer.

INSTRUCTIONS:

1. Join your Zoom meeting normally. Maximize the window, but don't go into full screen mode. Start the ZoomClicker application.

2. Enter the number of screens expected in the Zoom meeting (2 if there will be greater than 25 and less than 50, 3 if there will be greater than 50 and less than 75, etc.). Enter at least two screens.

3. Enter the desired time interval between screen switches, selecting minutes or seconds, as appropriate. Too short an interval may become distracting; too long an interval may not give you a chance to see everyone enough. Try five minutes to start and then adjust to your liking. Don't enter less than 3 seconds, or you will lose mouse control. If this happens, you can wait for 100 clicks, after which the program will exit.

4. Press Start. Your mouse will be occupied by the program for about a half second as it switches pages at the end of each time interval. Otherwise it will be available for your use.

5. If you wish to change the settings at any time, enter new values and press Start again.

6. Press Quit when your meeting is over.
